### **New ATV-mounted Berthoud sprayer at Sprays & Sprayers**

Berthoud Sprayers have announced a new demountable sprayer system for ATVs which will be shown for the first time at Sprays & Sprayers.

Featuring a 70 litre main tank and a hand wash tank, Pulvexel offers the operator a combination of boom or hand held lance. These can be used together or independently thanks to a 2 way distribution valve with glycerine pressure gauge, making it a very flexible unit for amenity, horticultural and arable weed control applications.

The fully adjustable 1 metre stainless steel boom with 3 flat fan nozzles offers 1.5m wide coverage and can be set in a variety of horizontal or vertical positions to suit specific crops and tasks.

The telescopic hand held lance extends from 0.6 to 1.2m and is fitted with a highly efficient swirl nozzle.

The 12V pump has a flow output of 6.15 litres per minute at a maximum of 3.5 bar pressure with a simple to use regulation control fully integrated into the tank design.

Easy to clean, Pulvexel complies with current sprayer safety regulations and will fit all popular ATVs, secured by simple fastening straps.
