

Team Sprayers: press release

### **Strawberry Sprayers offer flexibility**

Team Sprayers of Ely pride themselves on listening to customer needs and meeting them with innovative new designs.

Their new strawberry sprayer is a case in point. Team were approached by a large grower with indoor suspended plants and table top plants. Their solution was to produce a hydrostatically powered pedestrian unit with interchangeable booms: upright for suspended plants, hooped for table top.

The sprayer is highly manoeuvrable with a single front wheel and forward/ reverse drive controls on the steering handle. Other controls on the conveniently positioned box include spray rate, pump, on-off etc.

Besides height adjustment, the upright boom folds flat to the sprayer body for ease of turning at the end of each row. Team are pleased to discuss specific requirements to meet the application needs of other growers.

The 200 litre tank is served by a 73 litre/ minute diaphragm pump.
